Inserts cloned unidirectionally in the SfiA and SfiB sites. Mass excise of library produced inserts in pTriplEx2 plasmid. Insert sequenced from both 5' and 3' ends using TriplEx2 sequencing primer and polydT 24 bp primer respectively.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       0;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Score 323.6; DB 7;

Genomic exploration of the hemiascomycetous yeasts: 1. A set of
yeast species for molecular evolution studies
FEBS Lett. 487 (1), 3-12 (2000)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   exignus, Saccharomyces servazzii, Zygosaccharomyces rouxii, Saccharomyces kluyveri, Kluyveromyces thermotolerans, Kluyveromyces lactis var. lactis, Kluyveromyces marxianus var. marxianus, Pichia angusta, Debaryomyces hansenii var. hansenii, Pichia sorbitophila, Candida tropicalis and Yarrowia lipolytica. Genomic inserts of 3 to 5 kb were prepared and both extremities were sequenced. See keywords for description of this sequence and for the sequence of the other extremity of this insert.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Casaregola, S., Neuveglise, C., Lepingle, A., Bon, E., Feynerol, C., Artiguenave, F., Wincker, P. and Gaillardin, C. Schmidt RR, N-PSDB; AAT64529, AAT64542. WPI; 1997-226226/20. (UYFL) UNIV FLORIDA. Miller P;

DNA encoding NADP-GDH alpha and beta sub-units - isolated from Chlorella sorokiniana algal protoplast(s), useful to modulate nitrogen metabolism plant cells.

Claim 1; Page 25-27; 61pp; English.

2 Polypeptides (AAW15407 and AAW15408) respectively comprise the alpha (AAW15407) and beta subunit (AAW15408) precursor proteins of an ammonium-inducible, chloroplast-localised NADP-specific glutamate dehydrogenase (NADP-GDH) of Chlorella sorokiniana. They are processed to mature alpha and beta subunits (see also AAW15401-12) that comprise the active NADP-GDH hexameric isoenzymes. The N metabolism of plants can be modulated (pref. increasing the assimilation of inorganic N into organic N) by transforming them with nucleotide sequences (see also AAW16429-30, AAW16417-48) encoding the alpha and/or beta subunits or precursor proteins. Such plants show improved properties, e.g. increased crop yield and improved stress tolerance. Heterohexamers having alpha and beta

The method is used to provide plants with increased yield, improved ammonium assimilation properties, increased tolerance to ammonia toxicity, improved osmotic stress tolerance and improved composition. The present sequence represents the amino acid sequence of Chlorella sorokiniana NADP-glutamate dehydrogenase alpha subunit, used in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Transforming a plant with a polynucleotide encoding a polypeptide with glutamate dehydrogenase activity provides a plant with modulated nitrogen metabolism useful to increase yield and ammonium and osmotic stress

                                                                                                                                                                                                                                                                밁
                                                                                                                                                                                                                                                                                               ঠ
                                                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to increasing or decreasing the nitrogen CC metabolism in plant cells by transforming a plant cell with a CC polynucleotide encoding a polypeptide having glutamate dehydrogenase CC (GDH) activity. The polypeptide is an alpha subunit of NADP-specific GDH (CC (ADQ36707, ADQ36729), a beta subunit of NADP-specific GDH (ADQ36709, CC ADQ36731), or their fragments, which exhibits GDH activity. The CC (ADQ36731), or their fragments, which exhibits GDH activity. The CC chloroplast transit peptide comprising ADQ36710 or ADQ36711, or their CC fragments that exhibit chloroplast transit activity. The method is useful CC for increasing or decreasing the nitrogen metabolism in plant cells. The CC methods, polynucleotides, and polypeptides are useful in producing plant CC sequence.is the precursor protein of the crop or plant. The present CC sequence is the precursor protein of the alpha subunit of the NADP-specific GDH, which is then processed to produce the mature alpha subunit of the NADP-specific GDH, used in the method of the invention.
                                                                                                                                                                                                                                                                                                                                     Query Match

                                                         2 Polypeptides (AAW15407 and AAW15408) respectively comprise the alpha (AAW15407) and beta subunit (AAW15408) precursor proteins of an ammonium-inducible, chloroplast-localised NADP-specific glutamate dehydrogenase (NADP-GDH) of Chlorella sorokiniana. They are processed to mature alpha and beta subunits (see also AAW15411-12) that comprise the active NADP-GDH hexameric isoenzymes. The N metabolism of plants can be modulated (pref. increasing the assimilation of inorganic N into organic N) by transforming them with nucleotide sequences (see also AAT64529-30, AAT64547-48) encoding the alpha and/or beta subunits or precursor proteins. Such plants show improved properties, e.g. increased crop yield and improved stress tolerance. Heterohexamers having alpha and beta subunits can be expressed that have higher aminating deaminating activity ratios (i.e. higher capacity for glutamate synthesis) than homohexamers. (Updated on 17-OCT-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      DNA encoding NADP-GDH alpha and beta sub-units - isolated from Chlorella sorokiniana algal protoplast(s), useful to modulate nitrogen metabolism

Transforming a plant with a polynucleotide encoding a polypeptide with glutamate dehydrogenase activity provides a plant with modulated nitrometabolism useful to increase yield and ammonium and osmotic stress
                                                                                                                                            tolerance.
                                                                                                                                                              nitrogen
```

Claim 6; Page 17-18; 35pp; English.

The invention relates to a method of modulating nitrogen metabolism in plant cells, comprising transforming a plant cell with a polynucleotide encoding a polypeptide having glutamate dehydrogenase activity, and culturing the cell to produce descendant cells which express the polypeptide. The method is used to provide plants with increased yield, improved ammonium assimilation properties, increased tolerance to ammonia toxicity, improved osmotic stress tolerance and improved composition. The present sequence represents the amino acid sequence of Chlorella sorokiniana NADP-glutamate dehydrogenase beta subunit, used in the method invention

Sequence 512 AA;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ঠ
                                                       B
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention relates to increasing or decreasing the nitrogen cometabolism in plant cells by transforming a plant cell with a polynucleotide encoding a polypeptide having plutamate dehydrogenase (GDH) activity. The polypeptide is an alpha subunit of NADP-specific GDH (ADQ36707, ADQ36729), a beta subunit of NADP-specific GDH (ADQ36707, ADQ36729), a beta subunit of NADP-specific GDH (ADQ36701), or their fragments, which exhibits GDH activity. The CC polynucleotide is operably linked to a polynucleotide encoding a CC chloroplast transit peptide comprising ADQ36710 or ADQ36711, or their fragments that exhibit chloroplast transit activity. The method is useful for increasing or decreasing the nitrogen metabolism in plant cells. The methods, polynucleotides, and polypeptides are useful in producing plant with increased yield, and with improved tolerance to ammonia toxicity, commotic stress, and composition of the crop or plant. The present sequence is the precursor protein of the beta subunit of the NADP-specific GDH, which is then processed to produce the mature alpha subunit of the NADP-specific GDH, used in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         S
                                           The invention relates to a method of modulating nitrogen metabolism in plant cells, comprising transforming a plant cell with a polynuclectide encoding a polypeptide having glutamate dehydrogenase activity, and culturing the cell to produce descendant cells which express the polypeptide. The method is used to provide plants with increased yield, improved ammonium assimilation properties, increased tolerance to ammonia toxicity, improved osmotic stress tolerance and improved composition. The present sequence represents the amino acid sequence of Chlorella sorokiniana mature NADP-glutamate dehydrogenase alpha subunit, used in
 Sequence 487 AA;
                                                                                                                                                                                                                                               Transforming a plant with a polynucleotide encoding a polypeptide with glutamate dehydrogenase activity provides a plant with modulated nitrogen metabolism useful to increase yield and ammonium and osmotic stress
                                                                                                                                                                                                                                                                                                                WPI; 2002-499691/53.

The polypeptide is an alpha subunit of NADP-specific GDH (ADQ36707, ADQ36729), a beta subunit of NADP-specific GDH (ADQ36709, ADQ36731), or thair fragments, which exhibits GDH activity. The polynucleotide is operably linked to a polynucleotide encoding a chloroplast transit peptide comprising ADQ36710 or ADQ36711, or their fragments that exhibit chloroplast transit activity. The method is useful for increasing or decreasing the nitrogen metabolism in plant cells. The methods, polynucleotides, and polypeptides are useful in producing plant with increased yield, and with improved tolerance to ammonia toxicity, osmotic stress, and composition of the crop or plant. The present sequence is the mature alpha subunit of the NADP-specific GDH used in the method of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       They are produced by removal of transit peptides from the precursor proteins (AAW15407-08). The N metabolism of plants can be modulated (pref. increasing the assimilation of inorganic N into organic N) by transforming them with nucleotide sequences (see also AAT64529-30). AAT64547-48) encoding the alpha and/or beta subunits or precursor proteins. Such plants show improved properties, e.g. increased crop yield and improved stress tolerance. Heterothexamers having alpha and beta subunite can be expressed that have higher aminating:deaminating activity ratios (i.e. higher capacity for glutamate synthesis) than homohexamers. (Updated on 17-OCT-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       2 Polypeptides (AAW15411 and AAW15412) respectively comprise the mature alpha subunit (AAW15407) and beta subunit (AAW15408) proteins of an ammonium-inducible, chloroplast-localised hexameric NADP-specific glutamate dehydrogenase (NADP-GDH) isoenzymes of Chlorella sorokiniana.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        DNA encoding NADP-GDH alpha and beta sub-units - isolated from Chlorella sorokiniana algal protoplast(8), useful to modulate nitrogen metabolism plant cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 487
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Claim 1; Page 44-46; 61pp;

                                                                                                                                                                              2 Polypeptides (AAW15411 and AAW15412) respectively comprise the mature alpha subunit (AAW15407) and beta subunit (AAW15408) proteins of an ammonium-inducible, chloroplast-localised hexameric NADP-specific glutamate dehydrogenase (NADP-CDH) isoenzymes of Chlorella sorokiniana. They are produced by removal of transit peptides from the precursor proteins (AAW15407-08). The N metabolism of plants can be modulated (pref. increasing the assimilation of inorganic N into organic N) by transforming them with nucleotide sequences (see also AAT64529-30, AAT64547-48) encoding the alpha and/or beta subunits or precursor proteins. Such plants show improved properties, e.g. increased crop yield and improved stress tolerance. Heterohexamers having alpha and beta subunits can be expressed that have higher aminating deaminating activity ratios (i.e. higher capacity for glutamate synthesis) than homohexamers. (Updated on 17-OCT-2003 to standardise OS field)
                                                                                                                             Sequence 476 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    plant cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              DNA encoding NADP-GDH alpha and beta sub-units - isolated from Chlorella sorokiniana algal protoplast(s), useful to modulate nitrogen metabolism

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ち 음 성
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               g
                        The invention relates to a method of modulating nitrogen metabolism in plant cells, comprising transforming a plant cell with a polynucleotide encoding a polypeptide having glutante dehydrogenase activity, and culturing the cell to produce descendant cells which express the polypeptide. The method is used to provide plants with increased yield, improved ammonium assimilation properties, increased tolerance to ammonitoxicity, improved osmotic stress tolerance and improved composition. The present sequence represents the amino acid sequence of Chlorella sorokiniana mature NADP-glutamate dehydrogenase beta subunit, used in the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequen
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Transforming a plant with a polynucleotide encoding a polypeptide with glutamate dehydrogenase activity provides a plant with modulated nitrogen metabolism useful to increase yield and ammonium and osmotic stress
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      NADP-specific glutamate dehydrogenase; NADP-GDH; beta subunit; nitrogen metabolism; plant; ammonium assimilation; transgenic; ammonia toxicity tolerance; osmotic stress tolerance; enzyme.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         WPI; 2002-499691/53.

The polypeptide is an alpha subunit of NADP-specific GDH (ADQ36707, ADQ36739), a beta subunit of NADP-specific GDH (ADQ36709, ADQ36731), or their fragments, which exhibits GDH activity. The polymucleotide is operably linked to a polymucleotide encoding a chloroplast transit peptide comprising ADQ36710 or ADQ36711, or their fragments that exhibit chloroplast transit activity. The method is useful for increasing or decreasing the nitrogen metabolism in plant cells. The methods, polymucleotides, and polypeptides are useful amounta toxicity, osmotic stress, and composition of the crop or plant. The present sequence is the mature beta subunit of the NADP-specific GDH used in the
                                                                                                                                                                       ABU38763 standard;

of the nucleic acid inhibits proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid.

(2) an obst cell containing the vector; (3) an isolated concluded are:

(3) an isolated concluded to the nucleic acid.

(4) an antibed by the antisense conclude; (5) producing the polypeptide or its fragment whose expression is inhibited by the antisense collect acid; (4) an antibody capable of specifically binding colludar proliferation or the activity of a gene in an operon required for proliferation; (7) identifying a compound that influences the activity of identifying a gene product or that has an activity against a biological pathway in which a proliferation, or that inhibits cellular proliferation; (8) compound's activity; (11) a culture comprising strains in which the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound's activity; (11) a culture comprising strains in which the gene conduct is overexpressed or underexpressed; (12) determining the extent conduct is overexpressed or underexpressed; (12) determining the extent conduct is overexpressed or underexpressed; (12) determining the extent conduct is overexpressed or underexpressed; (12) determining the extent conduct is overexpressed or underexpressed; (12) determining the extent conduct is overexpressed or underexpressed; (12) determining the extent conduct is overexpressed or underexpressed; (12) determining the extent conduct is overexpressed or underexpressed; (12) determining the extent conduct is overexpressed or underexpressed; (12) determining the extent conduct is overexpressed or underexpressed; (12) determining the extent conduct is overexpressed or underexpressed; (12) determining the extent conduct is overexpressed or underexpressed; (13) and inhibits the conduct is overexpressed or underexpressed; (13) determining the extent conduct is overexpressed or underexpressed; (13) and inhibits the conduct is overexpressed or unde
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        21-MAR-2001;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 В
                                                                                                                           The invention relates to Pseudomonas aeruginosa polypeptides and the polynucleotides encoding them. The sequences are useful in diagnosis at therapy of pathological conditions, as molecular targets for diagnostic prophylaxis and treatment of pathological conditions resulting from a bacterial infection, for evaluating a compound, such as a polypeptide, for the ability to bind a P. aeruginosa nucleic acid, as components of effective antibacterial targets, as targets for antibacterial drugs, including anti-P. aeruginosa drugs, as templates for recombinant
including anti-P. aeruginosa drugs, as templates for recombinant production of P. aeruginosa-derived peptides or polypeptides, as target components for diagnosis and/or treatment of P. aeruginosa-caused infection, and in detection of P. aeruginosa sequences or other sequences of Pseudomonas species using biochip technology. Sequences ABO67826-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Novel isolated nucleic acid encoding Pseudomonas aeruginosa polypeptide, useful as molecular targets for diagnostics, prophylaxis and treatment of pathological conditions resulting from bacterial infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Rubenfield MJ,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              18-FEB-1998;
27-JUL-1998;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Pseudomonas
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Bacterial infection;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         18-FEB-1999;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to a novel composition comprising outer-membrane vesicles (OMV) prepared from a first strain of Neisseria meningitidis and 1 or more proteins which are present in OMVs prepared from a second strain of N. meningitidis, but which are not present in OMVs prepared from a second from the first strain. The composition of the invention demonstrates antibacterial and antiinflammatory activities and may be useful in the field of meningococcal biochemistry, in particular the trafficking and localisation of meningococcal proteins, as well as in the prevention or treatment of meningococcal infections, possibly via the production of a vaccine or gene therapy. The current sequence is that of a Neisseria meningitidis MC58 outer-membrane vesicle (OMV) related membrane protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New compositions having outer-membrane vesicles and proteins from Neissearia meningitidis, useful in the field of meningococcal biochemistry, in particular for preventing and/or treating meningococcal
